A screenshot of a terminal window titled 'rkjha@rkjha-desktop: ~'. The window has a menu bar with 'File', 'Edit', 'View', 'Search', 'Terminal', and 'Help'. The terminal output shows the command 'espeak "I am Mr. X version 7.0 stable"' and several error messages: 'bt\_audio\_service\_open: connect() failed: Connection refused (111)', 'Cannot connect to server socket err = No such file or directory', and 'jack server is not running or cannot be started'. The prompt 'rkjha@rkjha-desktop:~\$' is visible at the end of the output.

```
rkjha@rkjha-desktop:~$ espeak "I am Mr. X version 7.0 stable"
bt_audio_service_open: connect() failed: Connection refused (111)
bt_audio_service_open: connect() failed: Connection refused (111)
bt_audio_service_open: connect() failed: Connection refused (111)
bt_audio_service_open: connect() failed: Connection refused (111)
Cannot connect to server socket err = No such file or directory
Cannot connect to server socket
jack server is not running or cannot be started
rkjha@rkjha-desktop:~$
```

But there are certain fields that computers have shown pretty interesting “capabilities” too.. I just installed ‘Gespeaker’ (0.7 version) in Ubuntu 12.04 (freshly installed) and it worked like a charm.

Under list, you should see the newly installed packages marked with a Greenish Tick.. But if you’re looking for a completely free, extremely user friendly and simple text to speech converter, then Gespeaker looks pretty good.. If you’re looking for an ease to use text to speech utility that can be used in GNU/Linux (Ubuntu in this case) then Gespeaker is a tool that you can try..  
sudo apt-get install gespeaker  
If you’re dissatisfied with the quality of the built in voices then you can try the “Mbrola” voices which are slightly better.. 0.4 Natty Narwhal, 10.10 and 10.04 by using the below command in your Terminal window.

You can easily fix this. And for that, 1. Click on the drop down menu next to “Mbrola Voices path” (in “Mbrola voices” tab) and open the below folder path (as shown in below screenshot).. Yep that should do it. Now scroll down the languages list and under your newly installed language/s it should display a Green Tick.. Share this: Related 4 thoughts on “Text to Speech Software for Ubuntu Linux – Gespeaker”  
I have installed gespeaker 0.4 users don’t have to go through all this hassle and can install ‘Mbrola’ voices by simply using their proper package name.. It has few built in voices in different languages (American English, Italian, French etc) that you have to install manually.

```
rkjha@rkjha-desktop: ~  
File Edit View Search Terminal Help  
rkjha@rkjha-desktop:~$ espeak "I am Mr. X version 7.0 stable"  
bt_audio_service_open: connect() failed: Connection refused (111)  
bt_audio_service_open: connect() failed: Connection refused (111)  
bt_audio_service_open: connect() failed: Connection refused (111)  
bt_audio_service_open: connect() failed: Connection refused (111)  
Cannot connect to server socket err = No such file or directory  
Cannot connect to server socket  
jack server is not running or cannot be started  
rkjha@rkjha-desktop:~$
```

\* Comes with inbuilt “Male” and “Female” voices (the ones come with “espeak”).. Just as is typed above All of that is great, but i cant use this "new" voice no matter what.. 8 I installed mbrola and I installed mbrola-en1, mbrola-us1, and mbrola-us2 Their folders (en1, us1, and us2) are directly under the /usr/share/mbrola folder.. The reason I mentioned that was because, perhaps the existing configuration file of ‘Gespeaker’ could be conflicting with your manual settings? So, have you tried removing the ‘Gespeaker’ settings file? I know you know this, but just in case, you can use the below command to get rid of that existing configuration file of ‘Gespeaker’.. \* Recordings are saved in the WAV format You can access few more settings via its “Preferences” window as well.

, but when I either hit refresh or just close gespeaker and restart it, either way, the voices list stays blank.. Step 1: Although in

---

this screenshot the “mbrola” folder is visible because I took this screenshot after manually locating that folder and didn’t remember the default folder that used to be there ? ...Step 2: Find the above mentioned folder path and once inside the “mbrola” folder, click on the “Open” button at the bottom ...2.. Whenever I am in gespeaker, it remains the same original and bored voice and cant change it to the new one.. They may not be as advanced as some of those premium (and proprietary ones) tool, but there are few noteworthy open source projects too.. And the individual voices are saved in three folders called ‘en1’, ‘us1’, ‘us2’ (and each folder has two files inside them).
